

Q Asphalt

Simple planning and continuous paving
at the right mix temperature.

Documentation | GPS-Tracking | Cost Reduction | Mobile Orders

Q Asphalt

The modern, digitized road construction is not limited to the process of realisation. State of the art process controls like Q Asphalt link and control the whole construction process. Q Asphalt enables easy and fast planning of complex construction sites in just a few minutes.

Advantages

- Optimised planning and execution
- Just-in-time logistics
- Real-time information for everyone involved
- Complete documentation of all processes

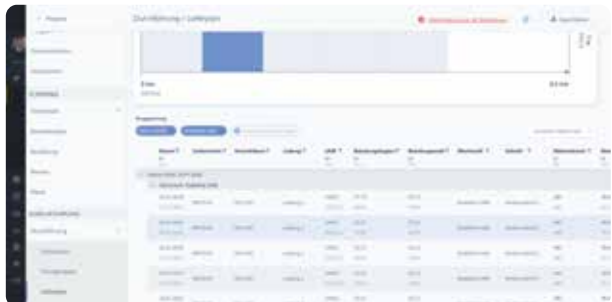

Planning of Resources

Cost Control

BIM 5D Planning

Q Asphalt

- is the most advanced process control software worldwide.
- organises building processes in road construction over the whole value chain.
- is integrated into the 360°-process cycle.
- opens up access to the global market and the interface for users and constructions projects worldwide.
- is the only true dynamic process control system on the market.

The influence of every modification to all other parameters within a construction project is processed. Thus you avoid friction loss at the interfaces of singular process steps and increase the efficiency of the whole construction from the mixing plant to the vehicle fleet up to your construction site.
