at any time under control.

Documentation | GPS-Tracking | Cost Reduction | Mobile Orders

Q Storage

When it comes to the effective management of materials, real-time queries and full transparency around the clock on any device are required. Precisely this is what Q Storage enables on all construction yards and construction sites.

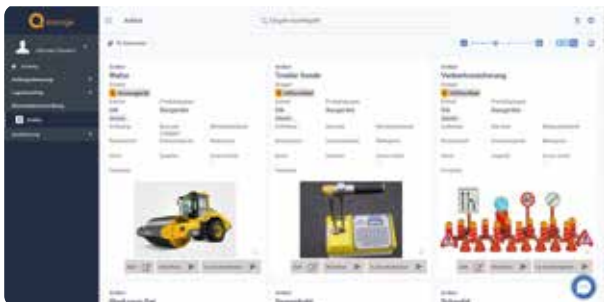

Advantages

- Barcode or RFID identification
- Can be used online and offline
- Fast real-time inventory queries
- Optimal use of storage capacity

Q Storage Overview

Article List

Effective Stocks

A new warehouse management system within 3 days

Due to its high level of standardisation and the possibility to operate Q Storage on a simple infrastructure (smartphone, tablet, etc.), the solution can be operational within an average of 3 days at any location. The onboarding process comprises three stages: Creation of a warehouse topology, inventory upload and go-live support.

Managing materials means saving time

Every employee who has access to Q Storage can see immediately and in real-time what products are in stock, wherein the warehouse and their availability for further processes such as disposition and provision. This enables targeted picking and provision.

Q Storage is characterised by its comfortable and intuitive user interface and process management. As a result, the solution has a high level of acceptance and requires little training.
