

SiteBuddy App

The SiteBuddy App is part of the Q Plant product range.

Q Point's SiteBuddy App is the innovative and simple solution for getting started with digital ordering for road builders and mix manufacturers. The app allows the site manager and the foreman on the construction site to order material with just a few clicks from the mixing plant directly through the app. Thanks to the intuitive menu guidance, a short familiarisation period and ease of use are guaranteed.

With the SiteBuddy App it is possible to communicate information in real-time to all those involved in the construction process.

Features

- Administration of the members of the paving team
- Registration and planning of road construction sites
- Acquisition of the geographic position of the construction site, including the associated POIs
- Access to an electronic directory of mixing plants and the offered mixture types
- Collection and management of mixing good orders
- Digital exchange of mixing good orders with the mixing plant
- Digital reading (QR code) and administration of mixing good delivery notes
- Monitoring of the quantities of mixing good (ordered, delivered and in the inflow)
- Weather forecast for the time of paving
- Push notification as soon as a vehicle is loaded and the delivery is ready
