

The tool for digital construction process support.

Q Site makes entering the world of the networked construction site quick and easy.

The mobile application accompanies you through the entire ordering and delivery process and ensures smooth communication between the mixing plant and the construction site. During installation, you will receive transparent information about the supply chain and quantity balances in real time.

Benefits and advantages

Get started immediately

No process adjustments and no implementation effort. Download, log in and work. Digitization can be that easy.

Intuitive application

An easy to understand user interface. Designed by builders for builders.

Individually usable

Can be used for any application and work location - on the construction site or on the go with a smartphone/tablet in the office via the web browser.

Easy administration

Overview of planned, under construction and completed construction projects.

Ordering and delivery process

Support of the digital ordering and delivery process for mixes. From the order and communication with your supplier to the subsequent construction work.

Real-time information

Receive transparent delivery information and continuous quantity balances during paving.

Digitally documented

All delivery notes, including the associated installation information, are documented in the overview.

Transparent information exchange

Uniform and transparent level of information for all involved parties. From the site manager to the foreman to the mixing plant.

Digital communication

Coordination and telephone calls are no longer necessary due to the digital exchange of information.

Reduce errors and misunderstandings

The guided and documented process avoids errors and misunderstandings.

Compatible with all mixing plants

Thanks to the e-mail-based ordering process, also for mixing plants that do not provide a digital connection.

Long-term archive

For construction projects including the associated documentation.

Individually expandable

With larger road construction projects, the need for additional documentation and functionality increases. With the different editions of Q Site, you can manage all these challenges easily and efficiently. The system supports you in the office and on the construction site with the construction site app throughout the entire cycle of your construction. From planning through execution to the final documentation, it provides you with helpful key figures that enable you to build easier, faster, and more successfully.

Essential

Support of the core processes of the construction company.

Basic functions for planning and documenting road construction projects.

Comprehensively digitally networked along the value chain - from the mixing plant through logistics to the construction site.

Professional

Entry into the world of digital construction process support.

Ideal for small and medium-sized road construction companies.

Manage construction projects, order mix, as well as easily keep track of delivery and paving.

Enterprise

The construction process control.

Fully integrated into the company's IT landscape.

Ideal for construction companies that need an advanced tool for the entire lifecycle - from design to execution. Including dynamic construction process control.
