Essential

The entry into the world of digital construction processes.

Manage projects with Q Site Essential, order mixes and easily keep an eye on delivery and installation.

Ideal for small and medium-sized road construction companies. A digital exchange of information brings the individual people in the company closer together. This increases transparency and forms the basis for making existing workflows efficient and cost-effective. The complete documentation saves time for the entire team. Misunderstandings and mistakes can be avoided, and the associated costs can be saved.

Benefits of the application:

- Get started immediately - no process adjustments and no implementation effort. Download, log in and work. Digitization can be that easy.

- Intuitive and easy to understand user interface. Designed by builders for builders.

- Can be used for any application and work location - on the construction site or on the go with a smartphone/tablet - In the office via the web browser.

- Simple management of the planned and ongoing construction projects.

- Support of the digital ordering and delivery process for mixes. From the order and communication with your supplier to the subsequent construction work.

- Real-time information during the paving - Transparent supply chain and ongoing quantity balances.

- All delivery notes, including the associated installation information, are documented in the overview.

- Uniform and transparent level of information for all involved parties - from the site manage to the foreman to the mixing plant.

- Coordination and telephone calls are no longer necessary due to the digital exchange of information.

- Reduce errors and misunderstandings - The guided and documented process avoids errors and misunderstandings.

- Compatible with all mixing plants. Thanks to the e-mail-based ordering process, also for mixing plants that do not provide a digital connection.

- Long-term archive of construction projects, including the associated documentation.

What else does the application offer:

- Always in sync - All information is automatically available in the app and also in the web portal.

- Each user can set their individual language of the user interface.

- Management of the members of your workspace. Simply invite the employees who are involved in your company via email.

- Isolated and protected data management for each individual workspace.

- Unlimited number of users

- Q Site offers single sign-on. This means that your employees use their respective company user account for access. The administration is carried out centrally by your company IT.

- Encrypted and secure communication with your mix suppliers.

- Available for Android, iOS, and major web browsers.

- Security settings for domain or IP-based access control.

- Expandable for full installation planning and construction process control (Q Site Enterprise).

- Integrated access to information and article directories of all mixing plants (Q Directories).
