Who is the workshop aimed at?

At employees of construction companies who are responsible for the planning and execution of construction sites in their company or area. Typically, site foreman and foremen who are in contact with their mix supplier, ordering mix and are involved in the delivery and paving process during construction.

Goal of the workshop

The customer receives his own individual work area for the management of construction sites and mix orders for his company. The participant gets to know the work process and the content related to the digital ordering and delivery process. He is then able to manage his construction sites, create mix orders and exchange them digitally with the mixing plant. He knows the delivery information that the mixing plant transmits during construction. The participant knows how to use the information on the status of the paving to optimize day-to-day business. He knows the options for managing and configuring the workspace in his company.

Content of the workshop
