

q plant Essential

The entry-level solution for mixing plant optimization.

Digital ordering and delivery process as a basis for optimizing the production sequence.

Digital communication | Transparent supply chain | Documentation

Essential

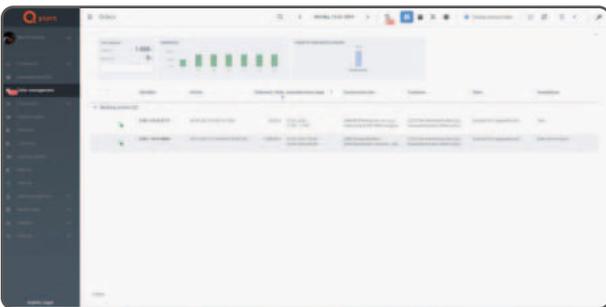

This edition is the entry-level solution from Q Plant. Every customer of the mixing plant can be provided with a digital ordering solution (usable via app or web portal). The digitally created mix orders are managed in the order portal, communication with the construction site is also digital and at any time.

Advantages

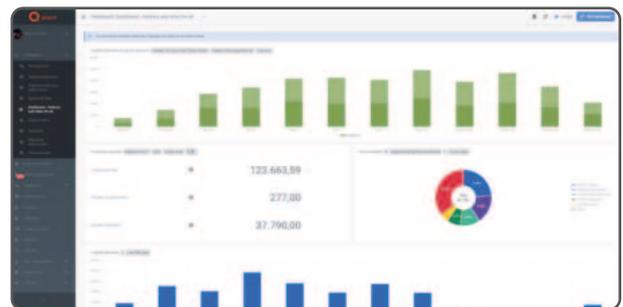

- Automated and optimized processes
- Improved data management
- Digital ordering and delivery process
- Transparent exchange of information between the mixing plant and the construction site

- Real-time information
- Basis for optimized production operations
- Automatic documentation
- Increasing customer loyalty

Project and order overview

Dashboards order and delivery

Features

- Order and delivery process
- Communication
- Project and order overview
- Order and delivery dashboards
- Management of master data
- Settings and user management

For „Delivered At Place“ deliveries, Q Plant Essential provides planning options and up-to-date information about the delivery process available. The transparent and comprehensible ordering system enables resource-saving production operations. The guided and documented process avoids errors and misunderstandings.

Interfaces

- Delivery note receipt and forwarding (weighbridge, customer)

The real-time information during paving creates a transparent supply chain and gives the construction site ongoing insight into the quantity balances.
