

Professional

Functions for the production and delivery of mix.

Comprehensive integration into the IT infrastructure.

Flexible interfaces | Useful analysis | Dynamic timing plan

Professional

In addition to the functionality of Q Plant Essential, this edition offers comprehensive integration options to integrate Q Plant into the plant's IT infrastructure. With this expansion, a seamless, holistic digital process can be implemented that can be used largely without manual intervention.

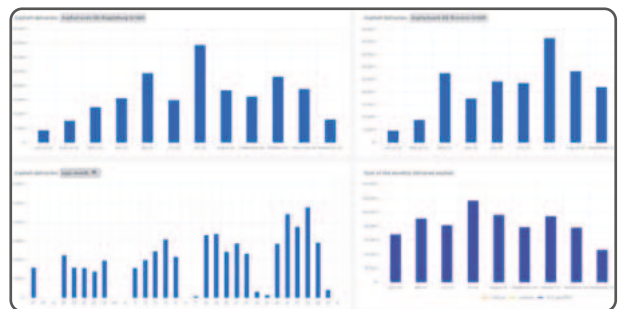

Advantages

- Holistic digital process
- Professional plant management
- Automatic information about customers, construction projects and mix items via interface
- Integration of process optimization solutions
- Clear display of all upcoming loadings
- Suggestion for an efficient loading sequence and transport
- Dynamic adjustment of delivery information

Delivery monitor

Dashboards delivery

Features

- All the benefits of Q Plant Essential
- Delivery monitor

Interfaces

- Master data comparison orders, articles (ERP)
- Process optimization software (customer)

Q Plant Professional connects process and master data (from existing IT systems), starting from the raw material suppliers through production to the construction site, along the entire digital value chain. Useful analyzes and dashboards complete the range of functions and make the application an ideal tool for professional plant management.

Gone are the days of manually transferring information from one system to another. We connect your weighing system and your commercial system with Q Plant to create an integrated overall solution. Information only needs to be recorded once and is then automatically available without errors.
