

Q_{site} Essential

Functions for planning, control and documentation.

Optimal use of resources for continuous paving.

Digital documentation | Equipment and transport planning | Live position

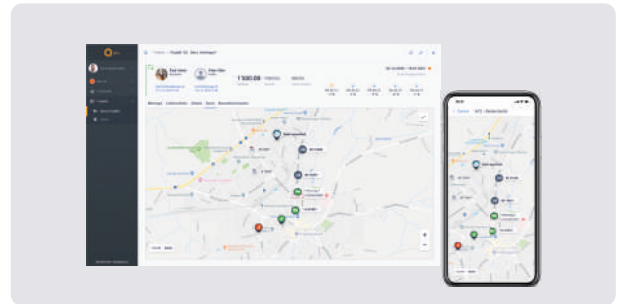

Essential

Q Site Essential is the flexible, deployable solution that is available as a mobile app and in the web browser. It supports the structured, digital ordering and delivery process for any mix supplier.

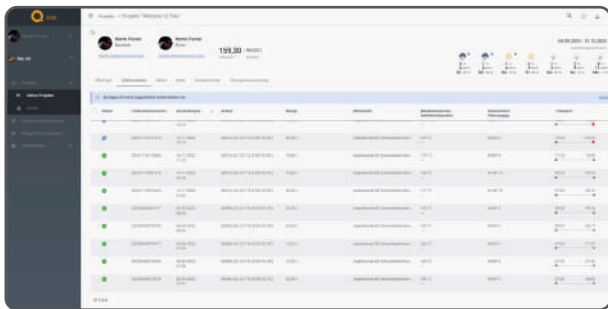

Advantages

- Information about truck drivers' geositions and arrival times
- Predictive control of paving
- Optimal resource planning of personnel, equipment and transport
- Project-related documentation option

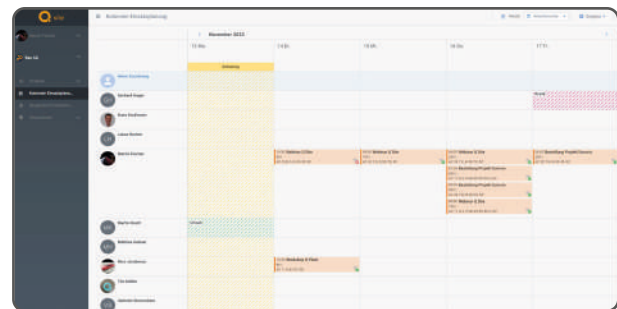

TruckBuddy App

Document archive

Team deployment planning

Features

- All features of Q Site Entry
- Truck live position
- Equipment deployment planning
- Team deployment planning
- Transport deployment planning
- Paving documentation and document archive

Interfaces

- Orders (suppliers)*
- Delivery notes receipt (suppliers)*
- Delivery note forwarding (performance entry, delivery note control)*
- Master data comparison construction projects (ERP)*
- Vehicle and position data (telematics systems)*

* Optionally/modularly expandable

All communication and changes are handled in a comprehensible manner using this solution. Digital delivery information is provided to the site manager or foreman in real time for efficient paving. Q Site Essential enables truck scheduling for "ex works" deliveries and offers a digital delivery note archive. Operations planning for crews and construction equipment complements the range of functions.
