

Professional

Effortless Planning for Construction Sites of Any Size

Meets all requirements for the planning and execution of constructions, from small-scale to large-scale projects.

Insightful Dashboards | Seamless Connectivity | Perfect Delivery Scheduling

Professional

Q Site Professional offers an enhanced range of features and supporting planning capabilities, providing a user-friendly digital construction site solution that stands out for its ease of use. The software simplifies quantity estimation based on geometric data, supports efficient delivery and scheduling planning, and provides tools for monitoring the progress of operational installation.

Benefits

- Digital networking of all stakeholders involved in the construction process
- Reports for efficiency analysis and process optimization
- Quantity estimation based on construction plans and specification data

- Route planning with digital driver communication
- Real-time visualization of construction progress
- Requirements of public clients
- Demand-driven construction site supply

Quantity Calculation

Cockpit

Features

- All functions of Q Site Essential
- Insightful dashboards, reports, and analyses
- Accurate quantity estimation
- Optimized delivery scheduling
- Efficient transport route planning
- User-friendly cockpit

The software promotes efficient and transparent collaboration by digitally connecting all stakeholders involved in the construction process. The demand-driven scheduling ensures optimal delivery to the construction site, enabling smooth coordination of workflows, minimizing waiting times, and optimizing resource utilization. This solution contributes to the sustainable and cost-effective execution of construction projects.

For large-scale projects, public clients often require specific planning documentation and digital data submissions. Q Site Professional meets these requirements by providing the necessary reports and data interfaces in compliance with QSBW 4.0 in Baden-Württemberg (Germany) and other tendering regulations.
