

TruckBuddy App

The easiest way to integrate transport vehicles into a digital supply chain. This gives you the performance transparency you need for an economical transport fleet.

Transparency - knowledge advantage through live information on geo-positions and expected arrival times at the transport destination.

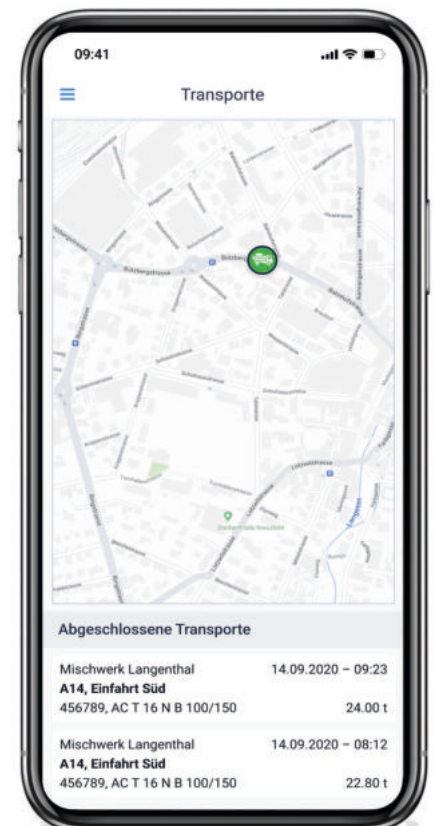

Efficiency - live information forms the basis for a driving and downtime evaluation as well as the relevant optimization measures.

Versatile – taking collaboration to a new level. Can be used universally with all digitized mixing plants (Q Plant) and construction companies (Q Site).

Networked – order-related, the companies involved in the process along the supply chain receive added value through the transfer of live information.

Simple – use without any training effort. Download and use it on the next transport trip.

Secure - digital, secure and compliant with data protection.

TruckBuddy App

The flexible link between supplier and customer.

On the mixing plant – The staff knows the positions and arrival times of the transport vehicles and thus keeps an eye on the supply chain for each individual order. Efficient loading and handling at the plant are the result.

On the construction site - The live information about the supply chain gives the foreman the necessary transparency for anticipatory control of the ongoing paving.
